MOUNTING INSTRUCTIONS

Mount your Wicked Edge® knife sharpener to a work bench or base using the template and instructions below. A selection of preconfigured stone bases are available on the web at:

www.wickededgeusa.com

Using a pair of scissors, cut along the solid border of this template. Place the cut-out template approximately on the location you intend to mount the sharpener. Use a ruler, or T-Square if you have one, to align the template exactly where you want it. Tape down the sides all the way around. Center a 13/64 drill bit on the centermark of each hole and drill straight down. You may use a 3/8" drill bit or larger, or a countersink bit, to countersink the holes on the bottom of your mounting surface. The screws provided are for mounting your sharpener to a bench or base that is 1-1/4" thick.
